

Talizen

AI Website Builder Platform

Build visually. Ship instantly. Own your code.

Overview

Talizen is a next-generation AI-powered website builder that automates the entire process from design to deployment. Users can generate production-ready websites using natural language or Figma designs.

Core Philosophy

Talizen combines AI generation, visual editing, and full code ownership. It eliminates technical barriers and enables anyone to launch websites in minutes.

Key Features

- AI-powered website generation
- Figma to website conversion
- Visual no-code editor
- Exportable production-ready code
- One-click deployment

Code Ownership

Unlike traditional builders, Talizen allows users to export full source code including HTML, React, and Next.js. No vendor lock-in.

Workflow

1. Describe your idea or import design
2. Generate website instantly
3. Edit visually and deploy

Use Cases

Startup landing pages, SaaS websites, portfolios, MVPs, and marketing campaigns.

Conclusion

Talizen redefines how websites are built by merging AI, design, and development into a single seamless workflow.
